

# Development Engineer – Willingham

## The company & products

Imagen helps sports, media and enterprise companies manage and distribute their ever-growing video libraries, enabling fast, easy, secure and controlled access to content through a highly customisable content portal.

Speed to market, greater choice and ease of access are critical to maximising the value of content. Imagen allows rights holders to monetise near-live video assets more effectively via a premium content distribution portal. Offering pin-point time-based video searching, instant playback, online editing and high-speed file transfer, Imagen unlocks the full commercial potential in media libraries.

With customers including the Premier League, BBC Studios, IMG, BP, Press Association, Endemol, Lad Bible, NATO, Channel 4, Reuters, AON and many more, Imagen offers a comprehensive and powerful platform to ensure that video is managed in the most efficient and cost-effective way. As the sheer amount of video data grows throughout the world, Imagen strives to create solutions that can generate more value from archive and near-live video.

And, hot off the blocks is our new *Imagen Go* Software-as-a-Service solution-bringing AI powered ingest and indexing to a broad selection of customers.

## The person

Are you driven to understand how things work? Are you always the first to spot the potential applications of new and unfamiliar technologies? And are you a hands-on developer who, when a new product or service is released, will be avidly downloading new SDKs on release day to pore over the APIs, building mash-ups to figure out what's possible?

That's great! But are you also the sort of person who, when you hear about a problem that someone needs to solve, find yourself thinking about the many ways in which you might go about addressing it? And, before you know it, do you find yourself undertaking prototyping spikes to figure out the pros and cons of different solutions? And then evangelising to others about which direction to take? You are? Read on!

Imagen is looking to recruit an ambitious full stack engineer like you, to help us extend and integrate the Imagen Platform with a broad ecosystem of other products, to build solutions that meet the workflow needs of tomorrow's Enterprise, Sports and Media customers.

## Key responsibilities:

- Work with the Senior Development Team, Product Manager and CTO to build new product capabilities, extending out to new platforms and addressing new use cases.
- Self-directed research to figure out “what’s possible”, and suggest ways that it might be applied within a business context.
- Work with the broader development team to extend and improve our end-to-end architecture.
- Liaise with technical support colleagues to troubleshoot and resolve customer issues.

## Experience & Qualifications:

- A wide range of familiarity with a disparate and esoteric range of technologies is required – and enthusiasm to dive into learning more is essential.
- Preferred : AWS, Azure, Node.js, Docker, Kubernetes, JavaScript, C, PHP, PowerShell, mobile application development...
- Preferably educated to degree level, but consideration will be given to candidates with relevant experience.
- Excellent collaboration skills (including when working remotely), and an ability to Get Things Done as part of a larger team.
- Fantastic communication skills with the ability to convey ideas and offer solutions to internal and external stakeholders.
- Good organisational skills, with the ability to manage priorities and work to deadlines.
- Confidence working with internal and external clients at all levels.
- Outstanding analytical skills for troubleshooting and problem solving.
